PRACTICAL COURSE WORKBOOK

Claude Workflow Practice

Build a responsible AI workflow for a real work task

LEVEL	Intermediate
GUIDED TIME	5 hours across 12 lessons
PROJECT	a documented prompt, verification and revision workflow
SKILLS	Claude, Long-context, API, Critical evaluation, Documentation
EDITORIAL STATUS	Structured draft v0.9

WHAT YOU WILL BE ABLE TO DO

- Use Claude appropriately in a realistic, bounded task.
- Use Long-context appropriately in a realistic, bounded task.
- Use API appropriately in a realistic, bounded task.

WHO THIS IS FOR

People who want dependable, responsible AI-assisted workflows.

BEFORE YOU BEGIN

- Basic computer and web skills

This open workbook is a structured draft undergoing course-specific editorial review. It does not provide certification.

COURSE MAP

From foundation to finished work

Claude Workflow Practice is a structured, practical course covering Claude, Long-context, API. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Claude: Foundations	1. Capabilities with Claude 2. Limitations with Long-context 3. Responsible use with API
02 Long-context: Working methods	1. Clear instructions with Claude 2. Context design with Long-context 3. Verification with API
03 API: Applied workflows	1. Research with Claude 2. Creation with Long-context 3. Automation with API
04 Claude: Quality and review	1. Evaluation with Claude 2. Privacy with Long-context 3. Repeatable practice with API

HOW TO STUDY EACH LESSON

1. Read the objective and identify the decision it supports.
2. Reproduce the worked example with the stated input.
3. Test one normal case and one boundary or failure case.
4. Complete the knowledge check without guessing.
5. Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable Claude Workflow Practice project using Claude, Long-context, API.

DELIVERABLE	A working Claude Workflow Practice artefact plus an evidence-based self-review.
TOOLS	A suitable Claude environment, A plain-text decision log, Test data or realistic sample material

Production plan

1. Define the intended user, outcome and constraints.
2. Create the smallest complete result using Claude.
3. Test one normal case, one boundary case and one failure response.
4. Revise the work from the evidence and preserve before-and-after results.
5. Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
