PRACTICAL COURSE WORKBOOK

Notion - Build Your Second Brain

Design a reliable workflow that reduces repetitive work

LEVEL	Beginner
GUIDED TIME	5 hours across 12 lessons
PROJECT	a mapped automation with tests and recovery steps
SKILLS	Notion, PKM, Templates, AI, Critical evaluation, Documentation
REVIEWED	2026-08-25

WHAT YOU WILL BE ABLE TO DO

- Use Notion appropriately in a realistic, bounded task.
- Use PKM appropriately in a realistic, bounded task.
- Use Templates appropriately in a realistic, bounded task.
- Use AI appropriately in a realistic, bounded task.

WHO THIS IS FOR

People designing reliable no-code and low-code workflows.

BEFORE YOU BEGIN

- Basic spreadsheet and web-app experience

Use this guide beside the interactive lessons. Keep inputs, decisions, tests, limitations and the next improvement.

COURSE MAP

From foundation to finished work

Notion - Build Your Second Brain is a structured, practical course covering Notion, PKM, Templates, AI. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Workflow design	1. Triggers with Notion 2. Actions with PKM 3. Data mapping with Templates
02 Building	1. Connections with AI 2. Conditions with Notion 3. Transformations with PKM
03 Reliability	1. Errors with Templates 2. Testing with AI 3. Monitoring with Notion
04 Operations	1. Documentation with PKM 2. Security with Templates 3. Maintenance with AI

HOW TO STUDY EACH LESSON

1. Read the objective and identify the decision it supports.
2. Reproduce the worked example with the stated input.
3. Test one normal case and one boundary or failure case.
4. Complete the knowledge check without guessing.
5. Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable Notion - Build Your Second Brain project using Notion, PKM, Templates.

DELIVERABLE	A working Notion - Build Your Second Brain artefact plus an evidence-based self-review.
TOOLS	A suitable Notion environment, A plain-text decision log, Test data or realistic sample material

Production plan

1. Define the intended user, outcome and constraints.
2. Create the smallest complete result using Notion.
3. Test one normal case, one boundary case and one failure response.
4. Revise the work from the evidence and preserve before-and-after results.
5. Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
