PRACTICAL COURSE WORKBOOK

Wearables, IoT & Digital Health Devices

Work with digital-health information responsibly

LEVEL	Intermediate
GUIDED TIME	5 hours across 12 lessons
PROJECT	a safe, fictional health-data workflow and review
SKILLS	Wearables, IoT, BLE, Health APIs, Fitbit SDK, Critical evaluation
REVIEWED	2026-08-25

WHAT YOU WILL BE ABLE TO DO

- Use Wearables appropriately in a realistic, bounded task.
- Use IoT appropriately in a realistic, bounded task.
- Use BLE appropriately in a realistic, bounded task.
- Use Health APIs appropriately in a realistic, bounded task.

WHO THIS IS FOR

Learners exploring health technology without replacing clinical expertise.

BEFORE YOU BEGIN

- Basic data literacy

Use this guide beside the interactive lessons. Keep inputs, decisions, tests, limitations and the next improvement.

COURSE MAP

From foundation to finished work

Wearables, IoT & Digital Health Devices is a structured, practical course covering Wearables, IoT, BLE, Health APIs, Fitbit SDK. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Health context	1. Care pathways with Wearables 2. Health data with IoT 3. Stakeholders with BLE
02 Digital systems	1. Standards with Health APIs 2. Interoperability with Fitbit SDK 3. Workflows with Wearables
03 Quality and safety	1. Validation with IoT 2. Privacy with BLE 3. Human oversight with Health APIs
04 Applied evaluation	1. Implementation with Fitbit SDK 2. Monitoring with Wearables 3. Equity with IoT

HOW TO STUDY EACH LESSON

1. Read the objective and identify the decision it supports.
2. Reproduce the worked example with the stated input.
3. Test one normal case and one boundary or failure case.
4. Complete the knowledge check without guessing.
5. Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable Wearables, IoT & Digital Health Devices project using Wearables, IoT, BLE.

DELIVERABLE	A working Wearables, IoT & Digital Health Devices artefact plus an evidence-based self-review.
TOOLS	A suitable Wearables environment, A plain-text decision log, Test data or realistic sample material

Production plan

1. Define the intended user, outcome and constraints.
2. Create the smallest complete result using Wearables.
3. Test one normal case, one boundary case and one failure response.
4. Revise the work from the evidence and preserve before-and-after results.
5. Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

RESPONSIBLE PRACTICE

This material is educational and does not provide medical advice or replace qualified clinical judgement.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
