

PRACTICAL COURSE WORKBOOK

Airtable - No-Code Database Apps

Design a reliable workflow that reduces repetitive work

LEVEL	Beginner
GUIDED TIME	5 hours across 12 lessons
PROJECT	a mapped automation with tests and recovery steps
SKILLS	Airtable, No-code, Database, Views, Critical evaluation, Documentation
EDITORIAL STATUS	Structured draft v0.9

WHAT YOU WILL BE ABLE TO DO

- Use Airtable appropriately in a realistic, bounded task.
- Use No-code appropriately in a realistic, bounded task.
- Use Database appropriately in a realistic, bounded task.
- Use Views appropriately in a realistic, bounded task.

WHO THIS IS FOR

People designing reliable no-code and low-code workflows.

BEFORE YOU BEGIN

- Basic spreadsheet and web-app experience

This open workbook is a structured draft undergoing course-specific editorial review. It does not provide certification.

COURSE MAP

From foundation to finished work

Airtable - No-Code Database Apps is a structured, practical course covering Airtable, No-code, Database, Views. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Airtable: Workflow design	1. Triggers with Airtable 2. Actions with No-code 3. Data mapping with Database
02 No-code: Building	1. Connections with Views 2. Conditions with Airtable 3. Transformations with No-code
03 Database: Reliability	1. Errors with Database 2. Testing with Views 3. Monitoring with Airtable
04 Views: Operations	1. Documentation with No-code 2. Security with Database 3. Maintenance with Views

HOW TO STUDY EACH LESSON

- 1 Read the objective and identify the decision it supports.
- 2 Reproduce the worked example with the stated input.
- 3 Test one normal case and one boundary or failure case.
- 4 Complete the knowledge check without guessing.
- 5 Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable Airtable - No-Code Database Apps project using Airtable, No-code, Database.

DELIVERABLE	A working Airtable - No-Code Database Apps artefact plus an evidence-based self-review.
TOOLS	A suitable Airtable environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using Airtable.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
