

PRACTICAL COURSE WORKBOOK

Blockchain & Web3 Development

Build a clearer, auditable financial workflow

LEVEL	Intermediate
GUIDED TIME	5 hours across 12 lessons
PROJECT	a fictional financial model with assumptions and checks
SKILLS	Blockchain, Solidity, DeFi, Smart Contracts, Web3, Critical evaluation
EDITORIAL STATUS	Structured draft v0.9

WHAT YOU WILL BE ABLE TO DO

- Use Blockchain appropriately in a realistic, bounded task.
- Use Solidity appropriately in a realistic, bounded task.
- Use DeFi appropriately in a realistic, bounded task.
- Use Smart Contracts appropriately in a realistic, bounded task.

WHO THIS IS FOR

Learners studying financial technology and analytical methods.

BEFORE YOU BEGIN

- Basic percentages and spreadsheet skills

This open workbook is a structured draft undergoing course-specific editorial review. It does not provide certification.

COURSE MAP

From foundation to finished work

Blockchain & Web3 Development is a structured, practical course covering Blockchain, Solidity, DeFi, Smart Contracts, Web3. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Blockchain: Financial foundations	1. Value with Blockchain 2. Risk with Solidity 3. Markets with DeFi
02 Solidity: Tools and data	1. Records with Smart Contracts 2. Analysis with Web3 3. Controls with Blockchain
03 DeFi: Applied decisions	1. Scenarios with Solidity 2. Evaluation with DeFi 3. Reporting with Smart Contracts
04 Smart Contracts: Risk and governance	1. Security with Web3 2. Regulation with Blockchain 3. Review with Solidity

HOW TO STUDY EACH LESSON

- 1 Read the objective and identify the decision it supports.
- 2 Reproduce the worked example with the stated input.
- 3 Test one normal case and one boundary or failure case.
- 4 Complete the knowledge check without guessing.
- 5 Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable Blockchain & Web3 Development project using Blockchain, Solidity, DeFi.

DELIVERABLE	A working Blockchain & Web3 Development artefact plus an evidence-based self-review.
TOOLS	A suitable Blockchain environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using Blockchain.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

RESPONSIBLE PRACTICE

This course is general education, not financial, investment, tax or legal advice.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
