

PRACTICAL COURSE WORKBOOK

NoSQL - MongoDB & Redis

Model, query and explain dependable data

LEVEL	Intermediate
GUIDED TIME	5 hours across 12 lessons
PROJECT	a working data model with validated queries
SKILLS	MongoDB, Redis, NoSQL, Caching, Atlas, Critical evaluation
EDITORIAL STATUS	Structured draft v0.9

WHAT YOU WILL BE ABLE TO DO

- Use MongoDB appropriately in a realistic, bounded task.
- Use Redis appropriately in a realistic, bounded task.
- Use NoSQL appropriately in a realistic, bounded task.
- Use Caching appropriately in a realistic, bounded task.

WHO THIS IS FOR

Developers and analysts who need dependable data systems.

BEFORE YOU BEGIN

- Basic programming or spreadsheet experience

This open workbook is a structured draft undergoing course-specific editorial review. It does not provide certification.

COURSE MAP

From foundation to finished work

NoSQL - MongoDB & Redis is a structured, practical course covering MongoDB, Redis, NoSQL, Caching, Atlas. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 MongoDB: Data modelling	1. Entities with MongoDB 2. Relationships with Redis 3. Constraints with NoSQL
02 Redis: Querying	1. Selection with Caching 2. Joins with Atlas 3. Aggregation with MongoDB
03 NoSQL: Reliability	1. Transactions with Redis 2. Indexes with NoSQL 3. Backups with Caching
04 Caching: Production design	1. Security with Atlas 2. Performance with MongoDB 3. Operations with Redis

HOW TO STUDY EACH LESSON

- 1 Read the objective and identify the decision it supports.
- 2 Reproduce the worked example with the stated input.
- 3 Test one normal case and one boundary or failure case.
- 4 Complete the knowledge check without guessing.
- 5 Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable NoSQL - MongoDB & Redis project using MongoDB, Redis, NoSQL.

DELIVERABLE	A working NoSQL - MongoDB & Redis artefact plus an evidence-based self-review.
TOOLS	A suitable MongoDB environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using MongoDB.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
