

## PRACTICAL COURSE WORKBOOK

# React Native - Mobile Apps

Build and test a responsive digital product

|                  |                                                                      |
|------------------|----------------------------------------------------------------------|
| LEVEL            | Intermediate                                                         |
| GUIDED TIME      | 5 hours across 12 lessons                                            |
| PROJECT          | a responsive, accessible application you can demonstrate             |
| SKILLS           | React Native, Expo, iOS, Android, Critical evaluation, Documentation |
| EDITORIAL STATUS | Structured draft v0.9                                                |

## WHAT YOU WILL BE ABLE TO DO

- Use React Native appropriately in a realistic, bounded task.
- Use Expo appropriately in a realistic, bounded task.
- Use iOS appropriately in a realistic, bounded task.
- Use Android appropriately in a realistic, bounded task.

## WHO THIS IS FOR

Learners building accessible, maintainable web products.

## BEFORE YOU BEGIN

- Comfort using a browser and text editor

---

This open workbook is a structured draft undergoing course-specific editorial review. It does not provide certification.

## COURSE MAP

# From foundation to finished work

React Native - Mobile Apps is a structured, practical course covering React Native, Expo, iOS, Android. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

| MODULE                                  | LESSONS AND FOCUS                                                                                   |
|-----------------------------------------|-----------------------------------------------------------------------------------------------------|
| <b>01 React Native: Web foundations</b> | 1. Standards with React Native<br>2. Structure with Expo<br>3. Developer tools with iOS             |
| <b>02 Expo: Core implementation</b>     | 1. Components with Android<br>2. State and data with React Native<br>3. Responsive layout with Expo |
| <b>03 iOS: Quality</b>                  | 1. Accessibility with iOS<br>2. Testing with Android<br>3. Performance with React Native            |
| <b>04 Android: Production practice</b>  | 1. Security with Expo<br>2. Deployment with iOS<br>3. Maintenance with Android                      |

## HOW TO STUDY EACH LESSON

- 1 Read the objective and identify the decision it supports.
- 2 Reproduce the worked example with the stated input.
- 3 Test one normal case and one boundary or failure case.
- 4 Complete the knowledge check without guessing.
- 5 Save a short evidence note: result, limitation and next action.

## CAPSTONE PROJECT

# Produce a reviewable React Native - Mobile Apps project using React Native, Expo, iOS.

|                    |                                                                                                        |
|--------------------|--------------------------------------------------------------------------------------------------------|
| <b>DELIVERABLE</b> | A working React Native - Mobile Apps artefact plus an evidence-based self-review.                      |
| <b>TOOLS</b>       | A suitable React Native environment, A plain-text decision log, Test data or realistic sample material |

## Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using React Native.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

## Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

## Evidence log

|                   |                                                      |
|-------------------|------------------------------------------------------|
| <b>INPUT</b>      | Original brief, data, requirements or test material. |
| <b>DECISIONS</b>  | Chosen method and one reasonable alternative.        |
| <b>TESTS</b>      | Normal, boundary and failure results.                |
| <b>LIMITATION</b> | What the result does not establish.                  |
| <b>REVISION</b>   | One evidence-led improvement.                        |

**REVIEW AND SOURCES**

# Make the work credible and repeatable

## Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
