

PRACTICAL COURSE WORKBOOK

Cybersecurity Fundamentals

Apply practical protection to accounts and systems

LEVEL	Beginner
GUIDED TIME	5 hours across 12 lessons
PROJECT	a prioritised security review and action plan
SKILLS	Security, Threats, Firewalls, OWASP, Critical evaluation, Documentation
EDITORIAL STATUS	Structured draft v0.9

WHAT YOU WILL BE ABLE TO DO

- Use Security appropriately in a realistic, bounded task.
- Use Threats appropriately in a realistic, bounded task.
- Use Firewalls appropriately in a realistic, bounded task.
- Use OWASP appropriately in a realistic, bounded task.

WHO THIS IS FOR

Defenders and developers learning lawful, defensive security practice.

BEFORE YOU BEGIN

- Basic networking and operating-system knowledge

This open workbook is a structured draft undergoing course-specific editorial review. It does not provide certification.

COURSE MAP

From foundation to finished work

Cybersecurity Fundamentals is a structured, practical course covering Security, Threats, Firewalls, OWASP. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Security: Security foundations	1. Assets with Security 2. Threats with Threats 3. Risk with Firewalls
02 Threats: Defensive controls	1. Identity with OWASP 2. Network protection with Security 3. Hardening with Threats
03 Firewalls: Assessment	1. Safe testing with Firewalls 2. Evidence with OWASP 3. Remediation with Security
04 OWASP: Operations	1. Monitoring with Threats 2. Response with Firewalls 3. Recovery with OWASP

HOW TO STUDY EACH LESSON

- 1 Read the objective and identify the decision it supports.
- 2 Reproduce the worked example with the stated input.
- 3 Test one normal case and one boundary or failure case.
- 4 Complete the knowledge check without guessing.
- 5 Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable Cybersecurity Fundamentals project using Security, Threats, Firewalls.

DELIVERABLE	A working Cybersecurity Fundamentals artefact plus an evidence-based self-review.
TOOLS	A suitable Security environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using Security.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

RESPONSIBLE PRACTICE

Use security techniques only on systems you own or are explicitly authorised to test.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
