

PRACTICAL COURSE WORKBOOK

SQL for Data Analysis

Turn untidy data into a defensible finding

LEVEL	Beginner
GUIDED TIME	5 hours across 12 lessons
PROJECT	a cleaned dataset, analysis and decision-ready chart
SKILLS	SQL, PostgreSQL, Analytics, Joins, Critical evaluation, Documentation
EDITORIAL STATUS	Structured draft v0.9

WHAT YOU WILL BE ABLE TO DO

- Use SQL appropriately in a realistic, bounded task.
- Use PostgreSQL appropriately in a realistic, bounded task.
- Use Analytics appropriately in a realistic, bounded task.
- Use Joins appropriately in a realistic, bounded task.

WHO THIS IS FOR

Learners using data and code to answer practical questions.

BEFORE YOU BEGIN

- Basic numeracy and file-management skills

This open workbook is a structured draft undergoing course-specific editorial review. It does not provide certification.

COURSE MAP

From foundation to finished work

SQL for Data Analysis is a structured, practical course covering SQL, PostgreSQL, Analytics, Joins. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 SQL: Data foundations	1. Problem framing with SQL 2. Data types with PostgreSQL 3. Tool setup with Analytics
02 PostgreSQL: Analysis	1. Cleaning with Joins 2. Exploration with SQL 3. Modelling with PostgreSQL
03 Analytics: Evaluation	1. Validation with Analytics 2. Uncertainty with Joins 3. Communication with SQL
04 Joins: Applied project	1. Workflow with PostgreSQL 2. Review with Analytics 3. Reproducibility with Joins

HOW TO STUDY EACH LESSON

- 1 Read the objective and identify the decision it supports.
- 2 Reproduce the worked example with the stated input.
- 3 Test one normal case and one boundary or failure case.
- 4 Complete the knowledge check without guessing.
- 5 Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable SQL for Data Analysis project using SQL, PostgreSQL, Analytics.

DELIVERABLE	A working SQL for Data Analysis artefact plus an evidence-based self-review.
TOOLS	A suitable SQL environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using SQL.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
