

PRACTICAL COURSE WORKBOOK

Data Visualization - Tableau & Python

Turn untidy data into a defensible finding

LEVEL	Intermediate
GUIDED TIME	5 hours across 12 lessons
PROJECT	a cleaned dataset, analysis and decision-ready chart
SKILLS	Tableau, Plotly, Seaborn, Dashboards, Critical evaluation, Documentation
EDITION	Structured draft - version 0.9

WHAT YOU WILL BE ABLE TO DO

- Use Tableau appropriately in a realistic, bounded task.
- Use Plotly appropriately in a realistic, bounded task.
- Use Seaborn appropriately in a realistic, bounded task.
- Use Dashboards appropriately in a realistic, bounded task.

WHO THIS IS FOR

Learners using data and code to answer practical questions.

BEFORE YOU BEGIN

- Basic numeracy and file-management skills

Use this workbook with the online lessons. It is designed for A4 printing, handwritten evidence notes, and offline revision. It does not provide certification.

WORKBOOK GUIDE

A clear route through the course

Data Visualization - Tableau & Python is a structured, practical course covering Tableau, Plotly, Seaborn, Dashboards. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Tableau: Data foundations	1. Problem framing with Tableau 2. Data types with Plotly 3. Tool setup with Seaborn
02 Plotly: Analysis	1. Cleaning with Dashboards 2. Exploration with Tableau 3. Modelling with Plotly
03 Seaborn: Evaluation	1. Validation with Seaborn 2. Uncertainty with Dashboards 3. Communication with Tableau
04 Dashboards: Applied project	1. Workflow with Plotly 2. Review with Seaborn 3. Reproducibility with Dashboards

HOW TO USE EACH LESSON PAGE

- 1 Read the objective and identify the decision it supports.
- 2 Attempt the retrieval prompt before checking the online explanation.
- 3 Reproduce the worked example with the stated input.
- 4 Test one normal case and one boundary or failure case.
- 5 Record the result, limitation and next action in the evidence log.

PRINT AND FILE

Print at 100% scale on A4 paper. Use double-sided printing with long-edge binding. Keep completed pages with the project files named in the evidence log.

MODULE 01

Tableau: Data foundations

Apply Tableau through problem framing, data types, tool setup.

LESSON 01 / 18 MIN

Problem framing with Tableau

Learning objectives

- Explain problem framing in the context of Data Visualization - Tableau & Python.
- Apply Tableau to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

problem framing, Tableau, data

Retrieval prompt

In Data Visualization - Tableau & Python, which evidence best supports a problem framing result produced with Tableau?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 02 / 22 MIN

Data types with Plotly

Learning objectives

- Explain data types in the context of Data Visualization - Tableau & Python.
- Apply Plotly to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

data types, Plotly, data

Retrieval prompt

In Data Visualization - Tableau & Python, which evidence best supports a data types result produced with Plotly?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 03 / 26 MIN

Tool setup with Seaborn

Learning objectives

- Explain tool setup in the context of Data Visualization - Tableau & Python.
- Apply Seaborn to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

tool setup, Seaborn, data

Retrieval prompt

In Data Visualization - Tableau & Python, which evidence best supports a tool setup result produced with Seaborn?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

MODULE 02

Plotly: Analysis

Apply Plotly through cleaning, exploration, modelling.

LESSON 04 / 30 MIN

Cleaning with Dashboards

Learning objectives

- Explain cleaning in the context of Data Visualization - Tableau & Python.
- Apply Dashboards to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

cleaning, Dashboards, data

Retrieval prompt

In Data Visualization - Tableau & Python, which evidence best supports a cleaning result produced with Dashboards?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 05 / 18 MIN

Exploration with Tableau

Learning objectives

- Explain exploration in the context of Data Visualization - Tableau & Python.
- Apply Tableau to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

exploration, Tableau, data

Retrieval prompt

In Data Visualization - Tableau & Python, which evidence best supports a exploration result produced with Tableau?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 06 / 22 MIN

Modelling with Plotly

Learning objectives

- Explain modelling in the context of Data Visualization - Tableau & Python.
- Apply Plotly to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

modelling, Plotly, data

Retrieval prompt

In Data Visualization - Tableau & Python, which evidence best supports a modelling result produced with Plotly?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

MODULE 03

Seaborn: Evaluation

Apply Seaborn through validation, uncertainty, communication.

LESSON 07 / 26 MIN

Validation with Seaborn

- Learning objectives**
- Explain validation in the context of Data Visualization - Tableau & Python.
 - Apply Seaborn to a bounded practical task.
 - Evaluate the result using explicit quality criteria.

Key terms validation, Seaborn, data

Retrieval prompt In Data Visualization - Tableau & Python, which evidence best supports a validation result produced with Seaborn?

Evidence to keep ☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 08 / 30 MIN

Uncertainty with Dashboards

- Learning objectives**
- Explain uncertainty in the context of Data Visualization - Tableau & Python.
 - Apply Dashboards to a bounded practical task.
 - Evaluate the result using explicit quality criteria.

Key terms uncertainty, Dashboards, data

Retrieval prompt In Data Visualization - Tableau & Python, which evidence best supports a uncertainty result produced with Dashboards?

Evidence to keep ☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 09 / 18 MIN

Communication with Tableau

- Learning objectives**
- Explain communication in the context of Data Visualization - Tableau & Python.
 - Apply Tableau to a bounded practical task.
 - Evaluate the result using explicit quality criteria.

Key terms communication, Tableau, data

Retrieval prompt In Data Visualization - Tableau & Python, which evidence best supports a communication result produced with Tableau?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

MODULE 04

Dashboards: Applied project

Apply Dashboards through workflow, review, reproducibility.

LESSON 10 / 22 MIN

Workflow with Plotly

Learning objectives

- Explain workflow in the context of Data Visualization - Tableau & Python.
- Apply Plotly to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

workflow, Plotly, data

Retrieval prompt

In Data Visualization - Tableau & Python, which evidence best supports a workflow result produced with Plotly?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 11 / 26 MIN

Review with Seaborn

Learning objectives

- Explain review in the context of Data Visualization - Tableau & Python.
- Apply Seaborn to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

review, Seaborn, data

Retrieval prompt

In Data Visualization - Tableau & Python, which evidence best supports a review result produced with Seaborn?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 12 / 30 MIN

Reproducibility with Dashboards

Learning objectives

- Explain reproducibility in the context of Data Visualization - Tableau & Python.
- Apply Dashboards to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

reproducibility, Dashboards, data

Retrieval prompt

In Data Visualization - Tableau & Python, which evidence best supports a reproducibility result produced with Dashboards?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

CAPSTONE PROJECT

Produce a reviewable Data Visualization - Tableau & Python project using Tableau, Plotly, Seaborn.

DELIVERABLE	A working Data Visualization - Tableau & Python artefact plus an evidence-based self-review.
TOOLS	A suitable Tableau environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using Tableau.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

PROJECT EVIDENCE

Document decisions another person can review

1. PURPOSE AND USER

State the intended user, need, expected outcome and constraints.

2. INPUTS AND ASSUMPTIONS

List source files, data, versions, permissions and assumptions.

PROJECT EVIDENCE

Tests, limitations and revision

3. NORMAL CASE

Expected result, observed result and evidence location.

4. BOUNDARY OR FAILURE CASE

What was difficult, what happened and why it matters.

5. REVISION AND LIMITATION

What changed, what improved and what remains unproven.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?

FINAL DECISION

Is the project ready to share? State the evidence, remaining risk, owner and next review date.
