

PRACTICAL COURSE WORKBOOK

Deep Learning & Neural Networks

Turn untidy data into a defensible finding

LEVEL	Advanced
GUIDED TIME	5 hours across 12 lessons
PROJECT	a cleaned dataset, analysis and decision-ready chart
SKILLS	PyTorch, TensorFlow, CNN, Transformers, Critical evaluation, Documentation
EDITION	Structured draft - version 0.9

WHAT YOU WILL BE ABLE TO DO

- Use PyTorch appropriately in a realistic, bounded task.
- Use TensorFlow appropriately in a realistic, bounded task.
- Use CNN appropriately in a realistic, bounded task.
- Use Transformers appropriately in a realistic, bounded task.

WHO THIS IS FOR

Learners using data and code to answer practical questions.

BEFORE YOU BEGIN

- Basic numeracy and file-management skills

Use this workbook with the online lessons. It is designed for A4 printing, handwritten evidence notes, and offline revision. It does not provide certification.

WORKBOOK GUIDE

A clear route through the course

Deep Learning & Neural Networks is a structured, practical course covering PyTorch, TensorFlow, CNN, Transformers. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 PyTorch: Data foundations	1. Problem framing with PyTorch 2. Data types with TensorFlow 3. Tool setup with CNN
02 TensorFlow: Analysis	1. Cleaning with Transformers 2. Exploration with PyTorch 3. Modelling with TensorFlow
03 CNN: Evaluation	1. Validation with CNN 2. Uncertainty with Transformers 3. Communication with PyTorch
04 Transformers: Applied project	1. Workflow with TensorFlow 2. Review with CNN 3. Reproducibility with Transformers

HOW TO USE EACH LESSON PAGE

- 1 Read the objective and identify the decision it supports.
- 2 Attempt the retrieval prompt before checking the online explanation.
- 3 Reproduce the worked example with the stated input.
- 4 Test one normal case and one boundary or failure case.
- 5 Record the result, limitation and next action in the evidence log.

PRINT AND FILE

Print at 100% scale on A4 paper. Use double-sided printing with long-edge binding. Keep completed pages with the project files named in the evidence log.

MODULE 01

PyTorch: Data foundations

Apply PyTorch through problem framing, data types, tool setup.

LESSON 01 / 18 MIN

Problem framing with PyTorch

Learning objectives	- Explain problem framing in the context of Deep Learning & Neural Networks. - Apply PyTorch to a bounded practical task. - Evaluate the result using explicit quality criteria.
Key terms	problem framing, PyTorch, data
Retrieval prompt	In Deep Learning & Neural Networks, which evidence best supports a problem framing result produced with PyTorch?
Evidence to keep	☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 02 / 22 MIN

Data types with TensorFlow

Learning objectives	- Explain data types in the context of Deep Learning & Neural Networks. - Apply TensorFlow to a bounded practical task. - Evaluate the result using explicit quality criteria.
Key terms	data types, TensorFlow, data
Retrieval prompt	In Deep Learning & Neural Networks, which evidence best supports a data types result produced with TensorFlow?
Evidence to keep	☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 03 / 26 MIN

Tool setup with CNN

Learning objectives	- Explain tool setup in the context of Deep Learning & Neural Networks. - Apply CNN to a bounded practical task. - Evaluate the result using explicit quality criteria.
Key terms	tool setup, CNN, data
Retrieval prompt	In Deep Learning & Neural Networks, which evidence best supports a tool setup result produced with CNN?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

MODULE 02

TensorFlow: Analysis

Apply TensorFlow through cleaning, exploration, modelling.

LESSON 04 / 30 MIN

Cleaning with Transformers

Learning objectives

- Explain cleaning in the context of Deep Learning & Neural Networks.
- Apply Transformers to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

cleaning, Transformers, data

Retrieval prompt

In Deep Learning & Neural Networks, which evidence best supports a cleaning result produced with Transformers?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 05 / 18 MIN

Exploration with PyTorch

Learning objectives

- Explain exploration in the context of Deep Learning & Neural Networks.
- Apply PyTorch to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

exploration, PyTorch, data

Retrieval prompt

In Deep Learning & Neural Networks, which evidence best supports a exploration result produced with PyTorch?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 06 / 22 MIN

Modelling with TensorFlow

Learning objectives

- Explain modelling in the context of Deep Learning & Neural Networks.
- Apply TensorFlow to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

modelling, TensorFlow, data

Retrieval prompt

In Deep Learning & Neural Networks, which evidence best supports a modelling result produced with TensorFlow?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

MODULE 03

CNN: Evaluation

Apply CNN through validation, uncertainty, communication.

LESSON 07 / 26 MIN

Validation with CNN

Learning objectives

- Explain validation in the context of Deep Learning & Neural Networks.
- Apply CNN to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

validation, CNN, data

Retrieval prompt

In Deep Learning & Neural Networks, which evidence best supports a validation result produced with CNN?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 08 / 30 MIN

Uncertainty with Transformers

Learning objectives

- Explain uncertainty in the context of Deep Learning & Neural Networks.
- Apply Transformers to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

uncertainty, Transformers, data

Retrieval prompt

In Deep Learning & Neural Networks, which evidence best supports a uncertainty result produced with Transformers?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 09 / 18 MIN

Communication with PyTorch

Learning objectives

- Explain communication in the context of Deep Learning & Neural Networks.
- Apply PyTorch to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

communication, PyTorch, data

Retrieval prompt

In Deep Learning & Neural Networks, which evidence best supports a communication result produced with PyTorch?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

MODULE 04

Transformers: Applied project

Apply Transformers through workflow, review, reproducibility.

LESSON 10 / 22 MIN

Workflow with TensorFlow

Learning objectives

- Explain workflow in the context of Deep Learning & Neural Networks.
- Apply TensorFlow to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

workflow, TensorFlow, data

Retrieval prompt

In Deep Learning & Neural Networks, which evidence best supports a workflow result produced with TensorFlow?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 11 / 26 MIN

Review with CNN

Learning objectives

- Explain review in the context of Deep Learning & Neural Networks.
- Apply CNN to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

review, CNN, data

Retrieval prompt

In Deep Learning & Neural Networks, which evidence best supports a review result produced with CNN?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 12 / 30 MIN

Reproducibility with Transformers

Learning objectives

- Explain reproducibility in the context of Deep Learning & Neural Networks.
- Apply Transformers to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

reproducibility, Transformers, data

Retrieval prompt

In Deep Learning & Neural Networks, which evidence best supports a reproducibility result produced with Transformers?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

CAPSTONE PROJECT

Produce a reviewable Deep Learning & Neural Networks project using PyTorch, TensorFlow, CNN.

DELIVERABLE	A working Deep Learning & Neural Networks artefact plus an evidence-based self-review.
TOOLS	A suitable PyTorch environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using PyTorch.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

PROJECT EVIDENCE

Document decisions another person can review

1. PURPOSE AND USER

State the intended user, need, expected outcome and constraints.

2. INPUTS AND ASSUMPTIONS

List source files, data, versions, permissions and assumptions.

PROJECT EVIDENCE

Tests, limitations and revision

3. NORMAL CASE

Expected result, observed result and evidence location.

4. BOUNDARY OR FAILURE CASE

What was difficult, what happened and why it matters.

5. REVISION AND LIMITATION

What changed, what improved and what remains unproven.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?

FINAL DECISION

Is the project ready to share? State the evidence, remaining risk, owner and next review date.
