

PRACTICAL COURSE WORKBOOK

Cybersecurity Fundamentals

Apply practical protection to accounts and systems

LEVEL	Beginner
GUIDED TIME	5 hours across 12 lessons
PROJECT	a prioritised security review and action plan
SKILLS	Security, Threats, Firewalls, OWASP, Critical evaluation, Documentation
EDITION	Structured draft - version 0.9

WHAT YOU WILL BE ABLE TO DO

- Use Security appropriately in a realistic, bounded task.
- Use Threats appropriately in a realistic, bounded task.
- Use Firewalls appropriately in a realistic, bounded task.
- Use OWASP appropriately in a realistic, bounded task.

WHO THIS IS FOR

Defenders and developers learning lawful, defensive security practice.

BEFORE YOU BEGIN

- Basic networking and operating-system knowledge

Use this workbook with the online lessons. It is designed for A4 printing, handwritten evidence notes, and offline revision. It does not provide certification.

WORKBOOK GUIDE

A clear route through the course

Cybersecurity Fundamentals is a structured, practical course covering Security, Threats, Firewalls, OWASP. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Security: Security foundations	1. Assets with Security 2. Threats with Threats 3. Risk with Firewalls
02 Threats: Defensive controls	1. Identity with OWASP 2. Network protection with Security 3. Hardening with Threats
03 Firewalls: Assessment	1. Safe testing with Firewalls 2. Evidence with OWASP 3. Remediation with Security
04 OWASP: Operations	1. Monitoring with Threats 2. Response with Firewalls 3. Recovery with OWASP

HOW TO USE EACH LESSON PAGE

- 1 Read the objective and identify the decision it supports.
- 2 Attempt the retrieval prompt before checking the online explanation.
- 3 Reproduce the worked example with the stated input.
- 4 Test one normal case and one boundary or failure case.
- 5 Record the result, limitation and next action in the evidence log.

PRINT AND FILE

Print at 100% scale on A4 paper. Use double-sided printing with long-edge binding. Keep completed pages with the project files named in the evidence log.

MODULE 01

Security: Security foundations

Apply Security through assets, threats, risk.

LESSON 01 / 18 MIN

Assets with Security

Learning objectives

- Explain assets in the context of Cybersecurity Fundamentals.
- Apply Security to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

assets, Security, security

Retrieval prompt

In Cybersecurity Fundamentals, which evidence best supports a assets result produced with Security?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 02 / 22 MIN

Threats with Threats

Learning objectives

- Explain threats in the context of Cybersecurity Fundamentals.
- Apply Threats to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

threats, Threats, security

Retrieval prompt

In Cybersecurity Fundamentals, which evidence best supports a threats result produced with Threats?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 03 / 26 MIN

Risk with Firewalls

Learning objectives

- Explain risk in the context of Cybersecurity Fundamentals.
- Apply Firewalls to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

risk, Firewalls, security

Retrieval prompt

In Cybersecurity Fundamentals, which evidence best supports a risk result produced with Firewalls?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

MODULE 02

Threats: Defensive controls

Apply Threats through identity, network protection, hardening.

LESSON 04 / 30 MIN

Identity with OWASP

Learning objectives

- Explain identity in the context of Cybersecurity Fundamentals.
- Apply OWASP to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

identity, OWASP, security

Retrieval prompt

In Cybersecurity Fundamentals, which evidence best supports a identity result produced with OWASP?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 05 / 18 MIN

Network protection with Security

Learning objectives

- Explain network protection in the context of Cybersecurity Fundamentals.
- Apply Security to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

network protection, Security, security

Retrieval prompt

In Cybersecurity Fundamentals, which evidence best supports a network protection result produced with Security?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 06 / 22 MIN

Hardening with Threats

Learning objectives

- Explain hardening in the context of Cybersecurity Fundamentals.
- Apply Threats to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

hardening, Threats, security

Retrieval prompt

In Cybersecurity Fundamentals, which evidence best supports a hardening result produced with Threats?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

MODULE 03

Firewalls: Assessment

Apply Firewalls through safe testing, evidence, remediation.

LESSON 07 / 26 MIN

Safe testing with Firewalls

Learning objectives

- Explain safe testing in the context of Cybersecurity Fundamentals.
- Apply Firewalls to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

safe testing, Firewalls, security

Retrieval prompt

In Cybersecurity Fundamentals, which evidence best supports a safe testing result produced with Firewalls?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 08 / 30 MIN

Evidence with OWASP

Learning objectives

- Explain evidence in the context of Cybersecurity Fundamentals.
- Apply OWASP to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

evidence, OWASP, security

Retrieval prompt

In Cybersecurity Fundamentals, which evidence best supports a evidence result produced with OWASP?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 09 / 18 MIN

Remediation with Security

Learning objectives

- Explain remediation in the context of Cybersecurity Fundamentals.
- Apply Security to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

remediation, Security, security

Retrieval prompt

In Cybersecurity Fundamentals, which evidence best supports a remediation result produced with Security?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

MODULE 04

OWASP: Operations

Apply OWASP through monitoring, response, recovery.

LESSON 10 / 22 MIN

Monitoring with Threats

Learning objectives

- Explain monitoring in the context of Cybersecurity Fundamentals.
- Apply Threats to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

monitoring, Threats, security

Retrieval prompt

In Cybersecurity Fundamentals, which evidence best supports a monitoring result produced with Threats?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 11 / 26 MIN

Response with Firewalls

Learning objectives

- Explain response in the context of Cybersecurity Fundamentals.
- Apply Firewalls to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

response, Firewalls, security

Retrieval prompt

In Cybersecurity Fundamentals, which evidence best supports a response result produced with Firewalls?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 12 / 30 MIN

Recovery with OWASP

Learning objectives

- Explain recovery in the context of Cybersecurity Fundamentals.
- Apply OWASP to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

recovery, OWASP, security

Retrieval prompt

In Cybersecurity Fundamentals, which evidence best supports a recovery result produced with OWASP?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

CAPSTONE PROJECT

Produce a reviewable Cybersecurity Fundamentals project using Security, Threats, Firewalls.

DELIVERABLE	A working Cybersecurity Fundamentals artefact plus an evidence-based self-review.
TOOLS	A suitable Security environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using Security.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

RESPONSIBLE PRACTICE

Use security techniques only on systems you own or are explicitly authorised to test.

PROJECT EVIDENCE

Document decisions another person can review

1. PURPOSE AND USER

State the intended user, need, expected outcome and constraints.

2. INPUTS AND ASSUMPTIONS

List source files, data, versions, permissions and assumptions.

PROJECT EVIDENCE

Tests, limitations and revision

3. NORMAL CASE

Expected result, observed result and evidence location.

4. BOUNDARY OR FAILURE CASE

What was difficult, what happened and why it matters.

5. REVISION AND LIMITATION

What changed, what improved and what remains unproven.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?

FINAL DECISION

Is the project ready to share? State the evidence, remaining risk, owner and next review date.
