

PRACTICAL COURSE WORKBOOK

Vector Databases for AI Apps

Model, query and explain dependable data

LEVEL	Advanced
GUIDED TIME	5 hours across 12 lessons
PROJECT	a working data model with validated queries
SKILLS	Pinecone, Weaviate, pgvector, RAG, Embeddings, Critical evaluation
EDITION	Structured draft - version 0.9

WHAT YOU WILL BE ABLE TO DO

- Use Pinecone appropriately in a realistic, bounded task.
- Use Weaviate appropriately in a realistic, bounded task.
- Use pgvector appropriately in a realistic, bounded task.
- Use RAG appropriately in a realistic, bounded task.

WHO THIS IS FOR

Developers and analysts who need dependable data systems.

BEFORE YOU BEGIN

- Basic programming or spreadsheet experience

Use this workbook with the online lessons. It is designed for A4 printing, handwritten evidence notes, and offline revision. It does not provide certification.

WORKBOOK GUIDE

A clear route through the course

Vector Databases for AI Apps is a structured, practical course covering Pinecone, Weaviate, pgvector, RAG, Embeddings. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Pinecone: Data modelling	1. Entities with Pinecone 2. Relationships with Weaviate 3. Constraints with pgvector
02 Weaviate: Querying	1. Selection with RAG 2. Joins with Embeddings 3. Aggregation with Pinecone
03 pgvector: Reliability	1. Transactions with Weaviate 2. Indexes with pgvector 3. Backups with RAG
04 RAG: Production design	1. Security with Embeddings 2. Performance with Pinecone 3. Operations with Weaviate

HOW TO USE EACH LESSON PAGE

- 1 Read the objective and identify the decision it supports.
- 2 Attempt the retrieval prompt before checking the online explanation.
- 3 Reproduce the worked example with the stated input.
- 4 Test one normal case and one boundary or failure case.
- 5 Record the result, limitation and next action in the evidence log.

PRINT AND FILE

Print at 100% scale on A4 paper. Use double-sided printing with long-edge binding. Keep completed pages with the project files named in the evidence log.

MODULE 01

Pinecone: Data modelling

Apply Pinecone through entities, relationships, constraints.

LESSON 01 / 18 MIN

Entities with Pinecone

Learning objectives

- Explain entities in the context of Vector Databases for AI Apps.
- Apply Pinecone to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

entities, Pinecone, databases

Retrieval prompt

In Vector Databases for AI Apps, which evidence best supports a entities result produced with Pinecone?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 02 / 22 MIN

Relationships with Weaviate

Learning objectives

- Explain relationships in the context of Vector Databases for AI Apps.
- Apply Weaviate to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

relationships, Weaviate, databases

Retrieval prompt

In Vector Databases for AI Apps, which evidence best supports a relationships result produced with Weaviate?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 03 / 26 MIN

Constraints with pgvector

Learning objectives

- Explain constraints in the context of Vector Databases for AI Apps.
- Apply pgvector to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

constraints, pgvector, databases

Retrieval prompt

In Vector Databases for AI Apps, which evidence best supports a constraints result produced with pgvector?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

MODULE 02

Weaviate: Querying

Apply Weaviate through selection, joins, aggregation.

LESSON 04 / 30 MIN

Selection with RAG

Learning objectives

- Explain selection in the context of Vector Databases for AI Apps.
- Apply RAG to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

selection, RAG, databases

Retrieval prompt

In Vector Databases for AI Apps, which evidence best supports a selection result produced with RAG?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 05 / 18 MIN

Joins with Embeddings

Learning objectives

- Explain joins in the context of Vector Databases for AI Apps.
- Apply Embeddings to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

joins, Embeddings, databases

Retrieval prompt

In Vector Databases for AI Apps, which evidence best supports a joins result produced with Embeddings?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 06 / 22 MIN

Aggregation with Pinecone

Learning objectives

- Explain aggregation in the context of Vector Databases for AI Apps.
- Apply Pinecone to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

aggregation, Pinecone, databases

Retrieval prompt

In Vector Databases for AI Apps, which evidence best supports a aggregation result produced with Pinecone?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

MODULE 03

pgvector: Reliability

Apply pgvector through transactions, indexes, backups.

LESSON 07 / 26 MIN

Transactions with Weaviate

Learning objectives

- Explain transactions in the context of Vector Databases for AI Apps.
- Apply Weaviate to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

transactions, Weaviate, databases

Retrieval prompt

In Vector Databases for AI Apps, which evidence best supports a transactions result produced with Weaviate?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 08 / 30 MIN

Indexes with pgvector

Learning objectives

- Explain indexes in the context of Vector Databases for AI Apps.
- Apply pgvector to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

indexes, pgvector, databases

Retrieval prompt

In Vector Databases for AI Apps, which evidence best supports a indexes result produced with pgvector?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 09 / 18 MIN

Backups with RAG

Learning objectives

- Explain backups in the context of Vector Databases for AI Apps.
- Apply RAG to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

backups, RAG, databases

Retrieval prompt

In Vector Databases for AI Apps, which evidence best supports a backups result produced with RAG?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

MODULE 04

RAG: Production design

Apply RAG through security, performance, operations.

LESSON 10 / 22 MIN

Security with Embeddings

Learning objectives

- Explain security in the context of Vector Databases for AI Apps.
- Apply Embeddings to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

security, Embeddings, databases

Retrieval prompt

In Vector Databases for AI Apps, which evidence best supports a security result produced with Embeddings?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 11 / 26 MIN

Performance with Pinecone

Learning objectives

- Explain performance in the context of Vector Databases for AI Apps.
- Apply Pinecone to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

performance, Pinecone, databases

Retrieval prompt

In Vector Databases for AI Apps, which evidence best supports a performance result produced with Pinecone?

Evidence to keep

☐ Original input ☐ Observed result ☐ Boundary or failure result ☐ Limitation and next action

LESSON 12 / 30 MIN

Operations with Weaviate

Learning objectives

- Explain operations in the context of Vector Databases for AI Apps.
- Apply Weaviate to a bounded practical task.
- Evaluate the result using explicit quality criteria.

Key terms

operations, Weaviate, databases

Retrieval prompt

In Vector Databases for AI Apps, which evidence best supports a operations result produced with Weaviate?

Evidence to keep

[] Original input [] Observed result [] Boundary or failure result [] Limitation and next action

MODULE REVIEW

Turn the module into usable evidence

1. RETRIEVE

Without checking the lessons, explain the module's three most important ideas in your own words.

2. APPLY

Describe the example or file you produced, the input used, and the result you observed.

3. REVIEW

Record one uncertainty, one source to recheck, and the next deliberate practice action.

CAPSTONE PROJECT

Produce a reviewable Vector Databases for AI Apps project using Pinecone, Weaviate, pgvector.

DELIVERABLE	A working Vector Databases for AI Apps artefact plus an evidence-based self-review.
TOOLS	A suitable Pinecone environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using Pinecone.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

PROJECT EVIDENCE

Document decisions another person can review

1. PURPOSE AND USER

State the intended user, need, expected outcome and constraints.

2. INPUTS AND ASSUMPTIONS

List source files, data, versions, permissions and assumptions.

PROJECT EVIDENCE

Tests, limitations and revision

3. NORMAL CASE

Expected result, observed result and evidence location.

4. BOUNDARY OR FAILURE CASE

What was difficult, what happened and why it matters.

5. REVISION AND LIMITATION

What changed, what improved and what remains unproven.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?

FINAL DECISION

Is the project ready to share? State the evidence, remaining risk, owner and next review date.
