

PRACTICAL COURSE WORKBOOK

AI Policy: From Principles to Legislation

Use evidence to explain a public-interest problem

LEVEL	Beginner
GUIDED TIME	5 hours across 12 lessons
PROJECT	an evidence brief with a reproducible analysis
SKILLS	AI policy, EU AI Act, US AI policy, Governance, Regulation, Critical evaluation
REVIEWED	2026-08-25

WHAT YOU WILL BE ABLE TO DO

- Use AI policy appropriately in a realistic, bounded task.
- Use EU AI Act appropriately in a realistic, bounded task.
- Use US AI policy appropriately in a realistic, bounded task.
- Use Governance appropriately in a realistic, bounded task.

WHO THIS IS FOR

Public-interest learners using evidence and technology responsibly.

BEFORE YOU BEGIN

- Basic research and spreadsheet skills

Use this guide beside the interactive lessons. Keep inputs, decisions, tests, limitations and the next improvement.

COURSE MAP

From foundation to finished work

AI Policy: From Principles to Legislation is a structured, practical course covering AI policy, EU AI Act, US AI policy, Governance, Regulation. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Public problems	1. Stakeholders with AI policy 2. Institutions with EU AI Act 3. Evidence with US AI policy
02 Digital methods	1. Open data with Governance 2. Services with Regulation 3. Participation with AI policy
03 Policy design	1. Options with EU AI Act 2. Impact with US AI policy 3. Implementation with Governance
04 Accountability	1. Measurement with Regulation 2. Transparency with AI policy 3. Maintenance with EU AI Act

HOW TO STUDY EACH LESSON

- 1 Read the objective and identify the decision it supports.
- 2 Reproduce the worked example with the stated input.
- 3 Test one normal case and one boundary or failure case.
- 4 Complete the knowledge check without guessing.
- 5 Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable AI Policy: From Principles to Legislation project using AI policy, EU AI Act, US AI policy.

DELIVERABLE	A working AI Policy: From Principles to Legislation artefact plus an evidence-based self-review.
TOOLS	A suitable AI policy environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using AI policy.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
