

PRACTICAL COURSE WORKBOOK

GitHub Copilot for Developers

Build a responsible AI workflow for a real work task

LEVEL	Intermediate
GUIDED TIME	5 hours across 12 lessons
PROJECT	a documented prompt, verification and revision workflow
SKILLS	Copilot, AI coding, Code review, Critical evaluation, Documentation
REVIEWED	2026-08-25

WHAT YOU WILL BE ABLE TO DO

- Use Copilot appropriately in a realistic, bounded task.
- Use AI coding appropriately in a realistic, bounded task.
- Use Code review appropriately in a realistic, bounded task.

WHO THIS IS FOR

People who want dependable, responsible AI-assisted workflows.

BEFORE YOU BEGIN

- Basic computer and web skills

Use this guide beside the interactive lessons. Keep inputs, decisions, tests, limitations and the next improvement.

COURSE MAP

From foundation to finished work

GitHub Copilot for Developers is a structured, practical course covering Copilot, AI coding, Code review. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Foundations	1. Capabilities with Copilot 2. Limitations with AI coding 3. Responsible use with Code review
02 Working methods	1. Clear instructions with Copilot 2. Context design with AI coding 3. Verification with Code review
03 Applied workflows	1. Research with Copilot 2. Creation with AI coding 3. Automation with Code review
04 Quality and review	1. Evaluation with Copilot 2. Privacy with AI coding 3. Repeatable practice with Code review

HOW TO STUDY EACH LESSON

- 1 Read the objective and identify the decision it supports.
- 2 Reproduce the worked example with the stated input.
- 3 Test one normal case and one boundary or failure case.
- 4 Complete the knowledge check without guessing.
- 5 Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable GitHub Copilot for Developers project using Copilot, AI coding, Code review.

DELIVERABLE	A working GitHub Copilot for Developers artefact plus an evidence-based self-review.
TOOLS	A suitable Copilot environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using Copilot.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
