

PRACTICAL COURSE WORKBOOK

Database Design & Modelling

Model, query and explain dependable data

LEVEL	Beginner
GUIDED TIME	5 hours across 12 lessons
PROJECT	a working data model with validated queries
SKILLS	ERD, Normalisation, Schemas, Relationships, Critical evaluation, Documentation
REVIEWED	2026-08-25

WHAT YOU WILL BE ABLE TO DO

- Use ERD appropriately in a realistic, bounded task.
- Use Normalisation appropriately in a realistic, bounded task.
- Use Schemas appropriately in a realistic, bounded task.
- Use Relationships appropriately in a realistic, bounded task.

WHO THIS IS FOR

Developers and analysts who need dependable data systems.

BEFORE YOU BEGIN

- Basic programming or spreadsheet experience

Use this guide beside the interactive lessons. Keep inputs, decisions, tests, limitations and the next improvement.

COURSE MAP

From foundation to finished work

Database Design & Modelling is a structured, practical course covering ERD, Normalisation, Schemas, Relationships. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Data modelling	1. Entities with ERD 2. Relationships with Normalisation 3. Constraints with Schemas
02 Querying	1. Selection with Relationships 2. Joins with ERD 3. Aggregation with Normalisation
03 Reliability	1. Transactions with Schemas 2. Indexes with Relationships 3. Backups with ERD
04 Production design	1. Security with Normalisation 2. Performance with Schemas 3. Operations with Relationships

HOW TO STUDY EACH LESSON

- 1 Read the objective and identify the decision it supports.
- 2 Reproduce the worked example with the stated input.
- 3 Test one normal case and one boundary or failure case.
- 4 Complete the knowledge check without guessing.
- 5 Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable Database Design & Modelling project using ERD, Normalisation, Schemas.

DELIVERABLE	A working Database Design & Modelling artefact plus an evidence-based self-review.
TOOLS	A suitable ERD environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using ERD.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
