

PRACTICAL COURSE WORKBOOK

Digital Government & e-Services

Use evidence to explain a public-interest problem

LEVEL	Intermediate
GUIDED TIME	5 hours across 12 lessons
PROJECT	an evidence brief with a reproducible analysis
SKILLS	e-Government, Digital ID, GovTech, Open source, APIs, Critical evaluation
REVIEWED	2026-08-25

WHAT YOU WILL BE ABLE TO DO

- Use e-Government appropriately in a realistic, bounded task.
- Use Digital ID appropriately in a realistic, bounded task.
- Use GovTech appropriately in a realistic, bounded task.
- Use Open source appropriately in a realistic, bounded task.

WHO THIS IS FOR

Public-interest learners using evidence and technology responsibly.

BEFORE YOU BEGIN

- Basic research and spreadsheet skills

Use this guide beside the interactive lessons. Keep inputs, decisions, tests, limitations and the next improvement.

COURSE MAP

From foundation to finished work

Digital Government & e-Services is a structured, practical course covering e-Government, Digital ID, GovTech, Open source, APIs. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Public problems	1. Stakeholders with e-Government 2. Institutions with Digital ID 3. Evidence with GovTech
02 Digital methods	1. Open data with Open source 2. Services with APIs 3. Participation with e-Government
03 Policy design	1. Options with Digital ID 2. Impact with GovTech 3. Implementation with Open source
04 Accountability	1. Measurement with APIs 2. Transparency with e-Government 3. Maintenance with Digital ID

HOW TO STUDY EACH LESSON

- 1 Read the objective and identify the decision it supports.
- 2 Reproduce the worked example with the stated input.
- 3 Test one normal case and one boundary or failure case.
- 4 Complete the knowledge check without guessing.
- 5 Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable Digital Government & e-Services project using e-Government, Digital ID, GovTech.

DELIVERABLE	A working Digital Government & e-Services artefact plus an evidence-based self-review.
TOOLS	A suitable e-Government environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using e-Government.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
