

## PRACTICAL COURSE WORKBOOK

# Midjourney & AI Image Generation

Build a responsible AI workflow for a real work task

|             |                                                                              |
|-------------|------------------------------------------------------------------------------|
| LEVEL       | Beginner                                                                     |
| GUIDED TIME | 5 hours across 12 lessons                                                    |
| PROJECT     | a documented prompt, verification and revision workflow                      |
| SKILLS      | Midjourney, DALL / E 3, Stable Diffusion, Critical evaluation, Documentation |
| REVIEWED    | 2026-08-25                                                                   |

## WHAT YOU WILL BE ABLE TO DO

- Use Midjourney appropriately in a realistic, bounded task.
- Use DALL / E 3 appropriately in a realistic, bounded task.
- Use Stable Diffusion appropriately in a realistic, bounded task.

## WHO THIS IS FOR

People who want dependable, responsible AI-assisted workflows.

## BEFORE YOU BEGIN

- Basic computer and web skills

---

Use this guide beside the interactive lessons. Keep inputs, decisions, tests, limitations and the next improvement.

## COURSE MAP

# From foundation to finished work

Midjourney & AI Image Generation is a structured, practical course covering Midjourney, DALL / E 3, Stable Diffusion. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

| MODULE                       | LESSONS AND FOCUS                                                                                                   |
|------------------------------|---------------------------------------------------------------------------------------------------------------------|
| <b>01 Foundations</b>        | 1. Capabilities with Midjourney<br>2. Limitations with DALL / E 3<br>3. Responsible use with Stable Diffusion       |
| <b>02 Working methods</b>    | 1. Clear instructions with Midjourney<br>2. Context design with DALL / E 3<br>3. Verification with Stable Diffusion |
| <b>03 Applied workflows</b>  | 1. Research with Midjourney<br>2. Creation with DALL / E 3<br>3. Automation with Stable Diffusion                   |
| <b>04 Quality and review</b> | 1. Evaluation with Midjourney<br>2. Privacy with DALL / E 3<br>3. Repeatable practice with Stable Diffusion         |

## HOW TO STUDY EACH LESSON

- 1 Read the objective and identify the decision it supports.
- 2 Reproduce the worked example with the stated input.
- 3 Test one normal case and one boundary or failure case.
- 4 Complete the knowledge check without guessing.
- 5 Save a short evidence note: result, limitation and next action.

## CAPSTONE PROJECT

# Produce a reviewable Midjourney & AI Image Generation project using Midjourney, DALL / E 3, Stable Diffusion.

|                    |                                                                                                      |
|--------------------|------------------------------------------------------------------------------------------------------|
| <b>DELIVERABLE</b> | A working Midjourney & AI Image Generation artefact plus an evidence-based self-review.              |
| <b>TOOLS</b>       | A suitable Midjourney environment, A plain-text decision log, Test data or realistic sample material |

## Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using Midjourney.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

## Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

## Evidence log

|                   |                                                      |
|-------------------|------------------------------------------------------|
| <b>INPUT</b>      | Original brief, data, requirements or test material. |
| <b>DECISIONS</b>  | Chosen method and one reasonable alternative.        |
| <b>TESTS</b>      | Normal, boundary and failure results.                |
| <b>LIMITATION</b> | What the result does not establish.                  |
| <b>REVISION</b>   | One evidence-led improvement.                        |

## REVIEW AND SOURCES

# Make the work credible and repeatable

## Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
