

PRACTICAL COURSE WORKBOOK

Node.js & REST APIs

Build and test a responsive digital product

LEVEL	Intermediate
GUIDED TIME	5 hours across 12 lessons
PROJECT	a responsive, accessible application you can demonstrate
SKILLS	Node, Express, REST, JWT, Critical evaluation, Documentation
REVIEWED	2026-08-25

WHAT YOU WILL BE ABLE TO DO

- Use Node appropriately in a realistic, bounded task.
- Use Express appropriately in a realistic, bounded task.
- Use REST appropriately in a realistic, bounded task.
- Use JWT appropriately in a realistic, bounded task.

WHO THIS IS FOR

Learners building accessible, maintainable web products.

BEFORE YOU BEGIN

- Comfort using a browser and text editor

Use this guide beside the interactive lessons. Keep inputs, decisions, tests, limitations and the next improvement.

COURSE MAP

From foundation to finished work

Node.js & REST APIs is a structured, practical course covering Node, Express, REST, JWT. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Web foundations	1. Standards with Node 2. Structure with Express 3. Developer tools with REST
02 Core implementation	1. Components with JWT 2. State and data with Node 3. Responsive layout with Express
03 Quality	1. Accessibility with REST 2. Testing with JWT 3. Performance with Node
04 Production practice	1. Security with Express 2. Deployment with REST 3. Maintenance with JWT

HOW TO STUDY EACH LESSON

- 1 Read the objective and identify the decision it supports.
- 2 Reproduce the worked example with the stated input.
- 3 Test one normal case and one boundary or failure case.
- 4 Complete the knowledge check without guessing.
- 5 Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable Node.js & REST APIs project using Node, Express, REST.

DELIVERABLE	A working Node.js & REST APIs artefact plus an evidence-based self-review.
TOOLS	A suitable Node environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using Node.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
