

PRACTICAL COURSE WORKBOOK

Prompt Engineering Pro

Build a responsible AI workflow for a real work task

LEVEL	Intermediate
GUIDED TIME	5 hours across 12 lessons
PROJECT	a documented prompt, verification and revision workflow
SKILLS	Prompting, Chain-of-thought, RAG, Critical evaluation, Documentation
REVIEWED	2026-08-25

WHAT YOU WILL BE ABLE TO DO

- Use Prompting appropriately in a realistic, bounded task.
- Use Chain-of-thought appropriately in a realistic, bounded task.
- Use RAG appropriately in a realistic, bounded task.

WHO THIS IS FOR

People who want dependable, responsible AI-assisted workflows.

BEFORE YOU BEGIN

- Basic computer and web skills

Use this guide beside the interactive lessons. Keep inputs, decisions, tests, limitations and the next improvement.

COURSE MAP

From foundation to finished work

Prompt Engineering Pro is a structured, practical course covering Prompting, Chain-of-thought, RAG. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Foundations	1. Capabilities with Prompting 2. Limitations with Chain-of-thought 3. Responsible use with RAG
02 Working methods	1. Clear instructions with Prompting 2. Context design with Chain-of-thought 3. Verification with RAG
03 Applied workflows	1. Research with Prompting 2. Creation with Chain-of-thought 3. Automation with RAG
04 Quality and review	1. Evaluation with Prompting 2. Privacy with Chain-of-thought 3. Repeatable practice with RAG

HOW TO STUDY EACH LESSON

- 1 Read the objective and identify the decision it supports.
- 2 Reproduce the worked example with the stated input.
- 3 Test one normal case and one boundary or failure case.
- 4 Complete the knowledge check without guessing.
- 5 Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable Prompt Engineering Pro project using Prompting, Chain-of-thought, RAG.

DELIVERABLE	A working Prompt Engineering Pro artefact plus an evidence-based self-review.
TOOLS	A suitable Prompting environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using Prompting.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
