

PRACTICAL COURSE WORKBOOK

Webflow - No-Code Web Design

Design a reliable workflow that reduces repetitive work

LEVEL	Beginner
GUIDED TIME	5 hours across 12 lessons
PROJECT	a mapped automation with tests and recovery steps
SKILLS	Webflow, CMS, Interactions, Critical evaluation, Documentation
REVIEWED	2026-08-25

WHAT YOU WILL BE ABLE TO DO

- Use Webflow appropriately in a realistic, bounded task.
- Use CMS appropriately in a realistic, bounded task.
- Use Interactions appropriately in a realistic, bounded task.

WHO THIS IS FOR

People designing reliable no-code and low-code workflows.

BEFORE YOU BEGIN

- Basic spreadsheet and web-app experience

Use this guide beside the interactive lessons. Keep inputs, decisions, tests, limitations and the next improvement.

COURSE MAP

From foundation to finished work

Webflow - No-Code Web Design is a structured, practical course covering Webflow, CMS, Interactions. It emphasizes explainable methods, checked work and a final outcome that can be reviewed.

MODULE	LESSONS AND FOCUS
01 Workflow design	1. Triggers with Webflow 2. Actions with CMS 3. Data mapping with Interactions
02 Building	1. Connections with Webflow 2. Conditions with CMS 3. Transformations with Interactions
03 Reliability	1. Errors with Webflow 2. Testing with CMS 3. Monitoring with Interactions
04 Operations	1. Documentation with Webflow 2. Security with CMS 3. Maintenance with Interactions

HOW TO STUDY EACH LESSON

- 1 Read the objective and identify the decision it supports.
- 2 Reproduce the worked example with the stated input.
- 3 Test one normal case and one boundary or failure case.
- 4 Complete the knowledge check without guessing.
- 5 Save a short evidence note: result, limitation and next action.

CAPSTONE PROJECT

Produce a reviewable Webflow - No-Code Web Design project using Webflow, CMS, Interactions.

DELIVERABLE	A working Webflow - No-Code Web Design artefact plus an evidence-based self-review.
TOOLS	A suitable Webflow environment, A plain-text decision log, Test data or realistic sample material

Production plan

- 1 Define the intended user, outcome and constraints.
- 2 Create the smallest complete result using Webflow.
- 3 Test one normal case, one boundary case and one failure response.
- 4 Revise the work from the evidence and preserve before-and-after results.
- 5 Prepare a concise handover containing method, limitations and next step.

Definition of done

- The output matches the stated outcome.
- Inputs and decisions are reproducible.
- Boundary and failure evidence is included.
- Limitations and responsibility considerations are explicit.

Evidence log

INPUT	Original brief, data, requirements or test material.
DECISIONS	Chosen method and one reasonable alternative.
TESTS	Normal, boundary and failure results.
LIMITATION	What the result does not establish.
REVISION	One evidence-led improvement.

REVIEW AND SOURCES

Make the work credible and repeatable

Final self-review

- Can another learner repeat the method?
- Did I test a difficult case?
- Did I avoid unsupported claims?
- Is the next action proportionate to the remaining risk?
